

CONTENTS

Preface	I
Contents	II
01. Seismic Observations and Hazard Analysis in Taiwan	1
02. Seismic Design Force for Building in Taiwan.....	20
03. Design Procedure of Reinforced Concrete Buildings in Taiwan.....	45
04. Seismic Design Procedure of Steel Moment Resisting Frame Building Structures in Taiwan	102
05. Seismic Evaluation of the Existing Buildings by Using the Pushover Analysis Approach	115
06. Seismic Retrofit of Typical Low-Rise RC School Buildings in Taiwan	135
07. An Introduction to Earthquake Loss Estimation Technology.....	182
08. Applications of Early Seismic Loss Estimation and Risk Assessment Technologies.....	195
09. Introduction and Application of Seismic Passive and Semi-Active Control.....	209
10. Seismic Design for Structures with Isolation and Energy Dissipation systems	238
11. Seismic Design and Qualification Testing of Nonstructural Components	293
12a. Implementation of Earthquake Early Warning System: P-wave Predicated PGA Method.....	305
12b. Development of the Earthquake Early Warning System	317
13. Seismic Design for Bridges in Taiwan	330
14. Seismic Design for Bridges – An Example of Frame Pier Design.....	359
15. Seismic Evaluation and Retrofit of Existing Bridges.....	393
16. Introduction to Soil Liquefaction and Related Study at NCREE	423
17a. Seismic Design Principles of Structure Foundations.....	441
17b. Seismic Design of Foundations in Taiwan-Flexible Base Analysis	451
